**Hunter Urology** are a UK based specialist in self catheterisation and continence care. Launched in 2001 by Gary Hunter, **Hunter Urology** is passionate about helping both continence healthcare professionals and patients who must perform short or longer-term intermittent self-catheterisation (ISC).

**Hunter Urology** have joined the **Optimum Medical Group**, and together we are striving to deliver the best possible products and services for people living with continence conditions and those caring for them.

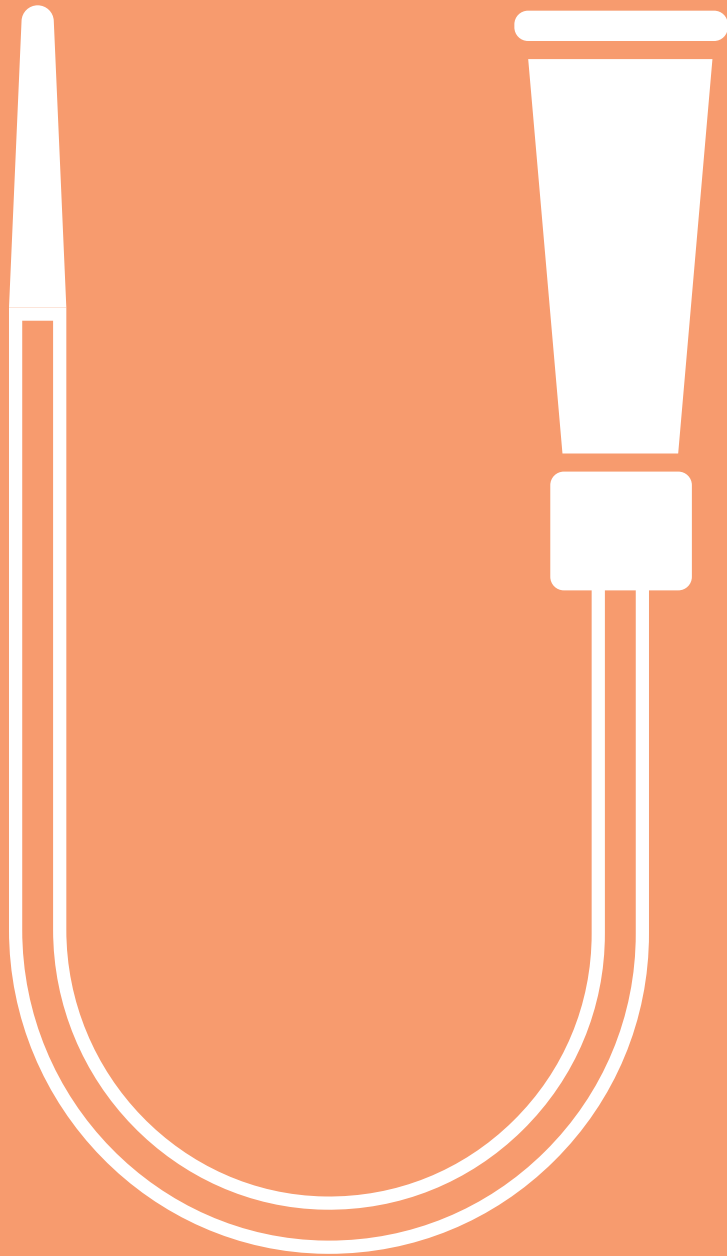

**Optimum Medicals** vision is to be 'The Most People Focused Healthcare Company in the World' and with a combination of creative healthcare products and our range of customer focused services, we are well on our way to achieving this vision.

Selling across the UK and Internationally, at **Optimum Medical** we specialise in urology and healthcare lubrication, with several market leading brands in our portfolio.

## What is intermittent self-catheterisation?

Intermittent self-catheterisation (ISC) is a long-established procedure that allows a person to empty their bladder fully, safely and effectively. For a person who self-catheterises, the bladder fills and stores urine effectively, but has difficulty emptying the bladder either fully or partially. This may be short term after continence operations (operations carried out to stop leakage of urine on coughing and sneezing) or long term in patients with neurological conditions that affect bladder nerve supply, such as after spinal cord injury.

The catheter is inserted to drain the urine, and then removed when finished, leaving the user catheter free until the bladder needs emptying again.

It can be performed by the catheter user, without a clinician present, once they have been shown the correct technique.

## Why choose Hunter Urology ISC catheters?

### Hydrophilic Coating

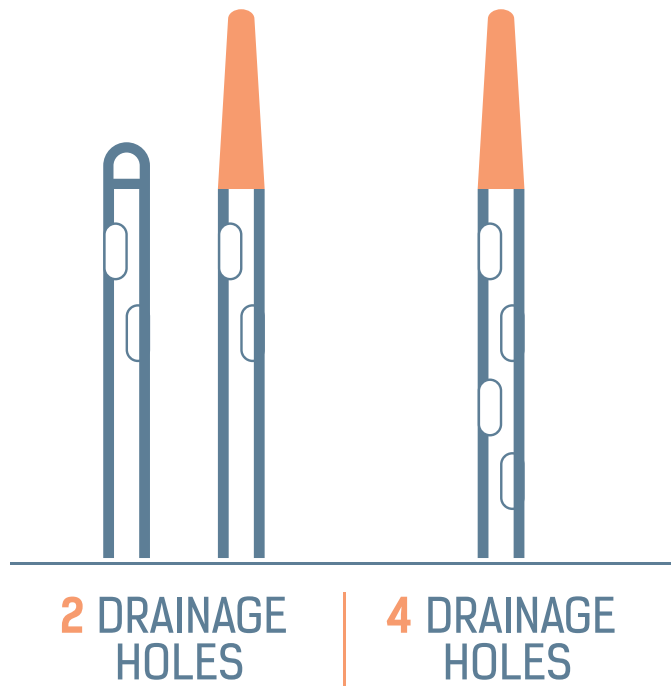

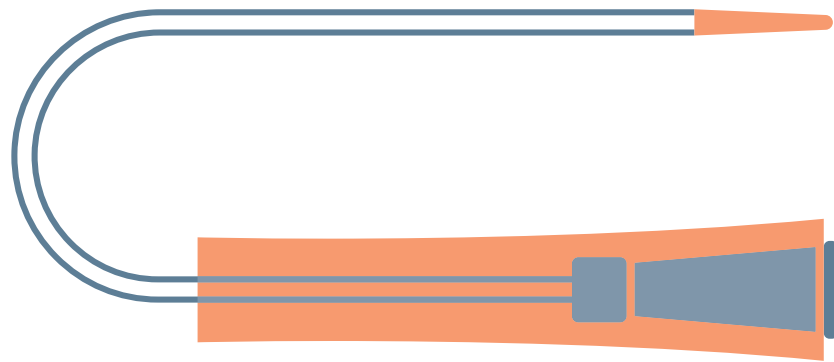

Hydrophilic coating is a special coating which is formulated to become slippery when it comes into contact with water. The coating is designed to allow gentle insertion of the catheter, reducing the risk of pain or trauma.

It's non-sticky, ensuring the user is comfortable during and after catheterisation.

---

### 360-degree soft tip

Our revolutionary 360-degree soft tip has been designed to ease insertion during intermittent self-catheterisation. The tapered tip gently navigates where needed and is recommended for those with a narrowing of the urethra or an enlarged prostate, where a Nelaton tip might cause pain or trauma.

## Catheter sleeve to allow non-touch catheterisation

Our **Aloe Hydro+** catheters feature a sleeve to aide with catheter insertion. The catheter is inserted holding the sleeve rather than the catheter itself, reducing the risk of introducing infection during the procedure.

---

## Drainage holes

Our catheters come with two drainage holes as standard but for users who experience high levels of debris or residue in their urine, they may benefit from using one of our catheters with four smooth drainage holes.

# Hydrophilic Coated Catheters

## aloehydro+

Our **Aloe Hydro+** ISC catheter features our hydrophilic coating. When activated using the sterile water sachet provided, the coating lubricates the entire catheter, reducing friction during insertion and removal.

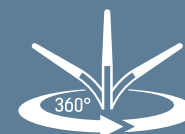

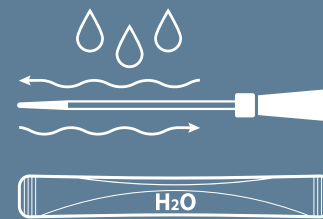

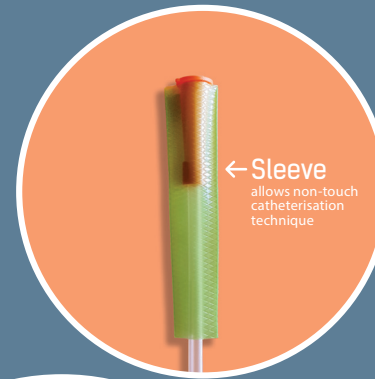

It also features a sleeve for holding during insertion, reducing the risk of introducing infection.

The soft tip is designed to ease insertion, making the **Aloe Hydro+** suitable for a wide range of ISC catheter users, including those males with an enlarged prostate or those who experience difficulty when inserting the catheter.

## aloehydro+

### KEY FEATURES:

- Hydrophilic coating activated using the sterile water sachet provided.
- DEHP Free.
- 360-degree flexible soft tip to aid insertion.
- Easy peel packaging opening.
- Specially designed water sachet for ease of use by those with reduced mobility or dexterity in their hands.
- Purposely designed tapered packaging to ensure complete lubrication of the catheter.
- Coloured tip for improved ease of use.
- Coloured funnel for easy size recognition.
- Two smooth, rounded drainage holes for effective urine drainage and reduced discomfort during catheter insertion and removal.
- Packaging features a sticky tab to assist with positioning of the catheter during set up.
- Sleeve to allow a non-touch catheterisation technique.
- Suitable for draining directly into a toilet or receptable.
- Can be attached to a drainage bag if required.
- Available in paediatric, adult male and adult female sizes.

# Dilation Catheters

## aloemeatal+

Our **Aloe Meatal+** features our hydrophilic coating. The **Aloe Meatal+** is a dilation catheter, designed for people living with, or at risk of, urethral strictures.

**Aloe Meatal+** features spacious tubing, designed to prevent the narrowing of the urethra so that urine can flow through more easily. Because the **Aloe Meatal+** is designed purely for dilation, it does not feature drainage holes for drainage of urine from the bladder.
